DETAILED ACTION

And

EXAMINER'S REASONS FOR ALLOWANCE

1. Claims 59-70 are allowed.
2. Claims 1-58 are cancelled.

Drawings

3. The Examiner thanks the Applicants' for submitting corrected drawings and withdraws any objection to the same.

Examiner's Reasons for Allowance

4. The following is an examiner's statement of reasons for allowance: The Applicants' claims are allowable for at least the following reasons.

4.1 As regards independent claims 59, 63 and 67 and using independent claim 59 as an example, the following limitations are neither anticipated nor made obvious by the prior art, *"selecting fine-grained synthesis and placement transforms"* in combination with *"applying transforms that change the physical, electrical, and Boolean domains concurrently."* The Examiner notes that the concurrent application of transforms in all three-design domains, i.e. the physical or actual polygon environment where the actual transistor devices are fabricated, or layout and Boolean or behavioral domains, is novel and that the prior art methods disclosed performing these optimizations separately and not concurrently.

- 4.2 Dependent claims 60-62, 64-66 and 68-70 are allowed for at least the reason that they depend upon an allowed base claim.

Art Unit: 2123

4.3 Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The Examiner has included a copy of Applicants' IEEE paper entitled "Transformation placement and synthesis" published on 3/27/2000 for purposes of making the prosecution record clear.

US Patent 5,508,937 discloses a method of incremental timing analysis that accounts for changes in an electronic design from different levels in the design (Abstract).

US Patent 6,314,552 discloses a method of traversing different levels of an electronic design architectures (Figure 4).

5.1 Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dwain M. Craig whose telephone number is (571) 272-3710. The examiner can normally be reached on 10:00 - 6:00 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Leo P. Picard can be reached on (571) 272-3749. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
